Reviewer's report

Title: Analgesic efficacy of cerebral and peripheral electrical stimulation in chronic nonspecific low back pain: a randomized, double-blind, factorial clinical trial.

Version: 1 Date: 24 November 2014

Reviewer: Giancarlo Barolat

Reviewer's report:

The proposed study, combining peripheral and cerebral stimulation, is intriguing and seems to be based on sound clinical premises. The problem of intractable low back pain is one of enormous clinical and social relevance, and scientifically sound treatments to try to addressed that are welcome. The proposed statistical sample and the study methodology are acceptable.

The manuscript can be accepted without any major or minor revisions.

Level of interest: An article of importance in its field

Quality of written English: Acceptable

Statistical review: No, the manuscript does not need to be seen by a statistician.
