Discretionary Revisions

1. The research question was well defined by the authors and the conclusions spoke to the original intentions of the research hypothesis.
2. Methodology was adequate.
3. Data collected with multiple sites and instruments are subject to collection or sample collection errors. May be a factor in this study.
4. This study appears to be sound.
5. Standards of reporting are met by this author.
6. Discussion was wordy. Conclusions not clear.
7. Limitations are defined.
8. The authors recognize the gaps in the current practice involving lower back pain management.
9. Title and abstract are very good.
10. The writing is somewhat wordy. Shorter sentences and grammar agreement throughout needs to be reexamined.
