Reviewer's report

Title: Knee arthrodesis using a unilateral external fixator combined with crossed cannulated screws for the treatment of end-stage tuberculosis of the knee

Version: 7 Date: 3 May 2015

Reviewer: Yusuf Öztürkmen

Reviewer's report:

I think this is a good manuscript that will add more information for the ongoing controversy about the treatment of joint destruction by tuberculosis. Although arthrodesis is a well-known technique for the end-stage of tuberculous arthritis, the readers must be aware of the technique when the other options such as arthroplasty fails for the treatment. With my best regards...

Level of interest: An article of outstanding merit and interest in its field

Quality of written English: Acceptable

Statistical review: No, the manuscript does not need to be seen by a statistician.
