**Title:** Segmentation of the lateral femoral notch sign with MRI using a new measurement technique

**Version:** 2  **Date:** 9 February 2015

**Reviewer:** Susan V Kattapuram

**Reviewer’s report:**

This paper titled “Segmentation of the lateral femoral notch sign with MRI using a new measurement technique” describes a new technique to measure the lateral femoral notch sign. The paper is fairly well written. There are few grammatical errors:

- Line –212 suffer should be used instead of suffered.
- Line 231— obvious should be used instead of obviously.

The concept is good.

Do any of these patients have follow-up MRI to see any early degenerative changes, correlation of the depth and volume of the notch to degenerative changes would have been great.
