Reviewer’s report

Title: Acromioclavicular joint dislocation treated with Bosworth Screw and additional K-wire fixation: Results after in mean 7.8 years - Still an adequate procedure?

Version: 2 Date: 11 May 2017

Reviewer: Amanda Esquivel

Reviewer's report:

Lines 205-206

There were significant changes in radiological measurements after surgery. This should be explained in more detail. What do you mean by 'the difference'? I assume you are referring to AC and CC joint space. If so, you could state:

The mean difference in AC and CC joint space between the injured AC joint and healthy AC was significantly reduced after surgery. Line 207 is fine.

Line 264: "Patients who experienced complications were less satisfied compared to those without, however, this was not statistically significant (P>0.066). This is results and should be reported in the results section. This is not discussion

Are the methods appropriate and well described?
If not, please specify what is required in your comments to the authors.

Yes

Does the work include the necessary controls?
If not, please specify which controls are required in your comments to the authors.

No

Are the conclusions drawn adequately supported by the data shown?
If not, please explain in your comments to the authors.

Yes

Are you able to assess any statistics in the manuscript or would you recommend an additional statistical review?
If an additional statistical review is recommended, please specify what aspects require further assessment in your comments to the editors.

I am able to assess the statistics
Quality of written English
