Reviewer’s report

Title: Concomitant glenohumeral pathologies in high-grade acromioclavicular separation (type III - V)

Version: 0 Date: 11 Aug 2017

Reviewer: Yun-Feng Yang

Reviewer's report:

1. This study is a good descriptive research to identify the incidence of concomitant injuries in patients with acromioclavicular separation as well as to reveal potential risk constellations. The number of the patients included is sufficient and analyzed in detail.

2. All patients in this study were operated and detected by arthroscopy, what about the patients without Operation? This will lead to bias in the conclusion.

3. Beside the arthroscopy during operation, how to diagnosis the acromioclavicular separation so as to determine the incidence of concomitant injuries.

4. We need X-ray or other necessary image to illustrate the concomitant injuries.

Are the methods appropriate and well described?
If not, please specify what is required in your comments to the authors.

Yes

Does the work include the necessary controls?
If not, please specify which controls are required in your comments to the authors.

Yes

Are the conclusions drawn adequately supported by the data shown?
If not, please explain in your comments to the authors.

Yes

Are you able to assess any statistics in the manuscript or would you recommend an additional statistical review?
If an additional statistical review is recommended, please specify what aspects require further assessment in your comments to the editors.

I am able to assess the statistics
Quality of written English
