Reviewer’s report

Title: A comparison of the stem cell characteristics of murine tenocytes and tendon-derived stem cells

Version: 0 Date: 01 Feb 2018

Reviewer: Leo Massari

Reviewer's report:

it is a well designed and well conducted study about tendon's stem cells in a murine population.

From a clinical point of view IT is not clear how the results could be traslate in a human setting and how they could be useful for treating human tendon diseases.

Can the Authors more specify these aspects in the discussion and conclusions paragraphers?

Are the methods appropriate and well described?
If not, please specify what is required in your comments to the authors.

Yes

Does the work include the necessary controls?
If not, please specify which controls are required in your comments to the authors.

Unable to assess

Are the conclusions drawn adequately supported by the data shown?
If not, please explain in your comments to the authors.

Yes

Are you able to assess any statistics in the manuscript or would you recommend an additional statistical review?
If an additional statistical review is recommended, please specify what aspects require further assessment in your comments to the editors.

I am able to assess the statistics
