Reviewer’s report

Title: Clinical characteristics and role of whole body bone scan in multifocal osteonecrosis

Version: 0 Date: 09 Oct 2018

Reviewer: ahmed abdelbaki

Reviewer's report:

1. Very well written article, brief, succinct with clear materials and methods. I have very minor suggestions, for example:

   a. In the introduction section, line 17, the authors can use the term all literature work instead of just works.

   b. In the variables section, line 25, the authors defined excessive alcohol intake and mentioned it was described previously. I don't think it was described previously earlier in the manuscript. Also, on line the authors can remove per day after 1 bottle of Soju since they already mentioned it is daily intake.

   c. In the results section, line 24, it is better to use the term idiopathic rather than idiopathology.

Are the methods appropriate and well described?
If not, please specify what is required in your comments to the authors.

Yes

Does the work include the necessary controls?
If not, please specify which controls are required in your comments to the authors.

Unable to assess

Are the conclusions drawn adequately supported by the data shown?
If not, please explain in your comments to the authors.

Yes

Are you able to assess any statistics in the manuscript or would you recommend an additional statistical review?
If an additional statistical review is recommended, please specify what aspects require further assessment in your comments to the editors.

I am able to assess the statistics
**Quality of written English**
