Reviewer’s report

Title: Recurrent femoral shaft fractures in a child with gnathodiaphyseal dysplasia: a case report

Version: 0 Date: 15 Jan 2019

Reviewer: Lars Helbig

Reviewer's report:

Reviewer’s report:

This manuscript "Recurrent femoral shaft fractures in a child with gnathodiaphyseal dysplasia: a case report" appears to be well written reporting on a sophisticated methodology.

I have however a few, but important flaws:

1. the authors should show all X-rays in two planes

2. the two fractures at half-pin insertion sites are not indicated. All fractures should be indicated by arrows.

3. In my opinion the supracondylare fracture was not addressed with the Ender nail. Could the authors explain their procedure in more detail ?

Are the methods appropriate and well described?
If not, please specify what is required in your comments to the authors.

Yes

Does the work include the necessary controls?
If not, please specify which controls are required in your comments to the authors.

Yes

Are the conclusions drawn adequately supported by the data shown?
If not, please explain in your comments to the authors.

Yes

Are you able to assess any statistics in the manuscript or would you recommend an additional statistical review?
If an additional statistical review is recommended, please specify what aspects require further assessment in your comments to the editors.
