Reviewer’s report

Title: Corticosteroid dose increase is a risk factor for nonalcoholic fatty liver disease and contralateral osteonecrosis of the femoral head: A case report

Version: 1 Date: 21 Jul 2018

Reviewer: Wing-Hoi Cheung

Reviewer's report:

This is a simple case report on the phenomenon that increasing corticosteroid increases the potential risk for nonalcoholic fatty liver disease and development of contralateral osteonecrosis, which reported one case only.

Nowadays, publishing a case report should report those very rare disease or very new technology. The phenomenon reported in this article is not very rare and the association is well known. The author should accumulate more similar case and find proper control cases for a fair comparison. Based on one clinical case only, there is very limited scientific value to publish as a case report.

Are the methods appropriate and well described?
If not, please specify what is required in your comments to the authors.

No

Does the work include the necessary controls?
If not, please specify which controls are required in your comments to the authors.

No

Are the conclusions drawn adequately supported by the data shown?
If not, please explain in your comments to the authors.

No

Are you able to assess any statistics in the manuscript or would you recommend an additional statistical review?
If an additional statistical review is recommended, please specify what aspects require further assessment in your comments to the editors.
