Reviewer’s report

Title: Pre-operative factors correlated with arthroscopic reparability of large-to-massive rotator cuff tears

Version: 0 Date: 09 Sep 2018

Reviewer: Reviewer 2

Reviewer's report:

PEER REVIEWER COMMENTS: To view the full report from the academic peer reviewer, please see the attached file.

REVIEWER COMMENTS FROM REPORT: Overall, this a well done study that aims to see if there are pre-operative risk factors that can predict the success of repair of large and massive rotator cuff tears. The methods are clear and well described, using the appropriate grading systems. The results are clear, although it is surprising that conclusions can be made with the multivariate analysis on a small sample size. The discussion is appropriate but has many grammatical errors. REQUESTED REVISIONS: Overall this is a well done paper, but it needs a fair amount of work on the grammar and syntax. ADDITIONAL REQUESTS/SUGGESTIONS: The authors should read over the manuscript carefully. There are many minor grammatical errors that could be eliminated and make the manuscript significantly stronger.

Are the methods appropriate and well described?  
If not, please specify what is required in your comments to the authors.

No

Does the work include the necessary controls?  
If not, please specify which controls are required in your comments to the authors.

No

Are the conclusions drawn adequately supported by the data shown?  
If not, please explain in your comments to the authors.

Yes

Are you able to assess any statistics in the manuscript or would you recommend an additional statistical review?  
If an additional statistical review is recommended, please specify what aspects require further assessment in your comments to the editors.
