Reviewer’s report

Title: ANTEROLATERAL LIGAMENT OF THE KNEE: A STEP-BY-STEP DISSECTION

Version: 1 Date: 16 Feb 2019

Reviewer: Christoph Kittl

Reviewer’s report:

The authors present a step-by-step dissection guide of the ALL. Still they did not describe their exact dissection method in relation to the posterior part of the ITB and the confluens of the biceps femoris. This should be done before publishing.

Title:
appropriate

Abstract:
appropriate

Introduction:
appropriate.

Dissection technique:

Line 94: Can the authors please describe their method to distinguish between the posterior part of the ITB and the ALL. It is called the capsulo-osseous layer.

Line 101: This has been described as the „biceps-capsuloosseous iliotibial tract confluens“ by Terry and Laprade

Conclusion:
appropriate

Figure and Table legends:
appropriate

References:

appropriate

Are the methods appropriate and well described?
If not, please specify what is required in your comments to the authors.

Yes

Does the work include the necessary controls?
If not, please specify which controls are required in your comments to the authors.

Unable to assess

Are the conclusions drawn adequately supported by the data shown?
If not, please explain in your comments to the authors.

Yes

Are you able to assess any statistics in the manuscript or would you recommend an additional statistical review?
If an additional statistical review is recommended, please specify what aspects require further assessment in your comments to the editors.
