Reviewer’s report

Title: Proximal Radius Fracture Morphology Following Axial Force Impact: A Biomechanical Evaluation of Fracture Patterns

Version: 1 Date: 05 Nov 2018

Reviewer: Tobias Kraus

Reviewer’s report:

Abstract

Well written and precise summary of the topic.

The topic is of clinical relevance and the article is of scientific merit.

Introduction

Well written and leads directly to the topic.

No remarks or changes needed.

Materials & Methods

The number of specimen seems to be sufficient.

The testing methods are valid.

Discussion

Well written. All relevant references are mentioned.

Conclusion

This section summarizes very well the presented work. The conclusion and the hypothesis are answered correctly.

References

The presented references respect the lastest findings.
Specimen: the provided pictures of the biomechanical setting very well illustrate the topic and the scientific value.

Are the methods appropriate and well described?
If not, please specify what is required in your comments to the authors.

Yes

Does the work include the necessary controls?
If not, please specify which controls are required in your comments to the authors.

No

Are the conclusions drawn adequately supported by the data shown?
If not, please explain in your comments to the authors.

Yes

Are you able to assess any statistics in the manuscript or would you recommend an additional statistical review?
If an additional statistical review is recommended, please specify what aspects require further assessment in your comments to the editors.

I am able to assess the statistics

Quality of written English
