Reviewer’s report

Title: Multicentric, multifocal, and recurrent osteoid osteoma of the hip: first case report

Version: 1 Date: 08 Mar 2019

Reviewer: Hideo Morioka

Reviewer's report:

This is a paper on a very rare case of multicentric osteoid osteoma occurred around the hip joint. In order to accept the paper, it is desirable to add the following points.

1) Is osteoid osteoma in the posterior part of the acetabulum shown in Fig. 3 recurrent or one of the multiple tumors? When a lesion in the posterior part of the acetabulum is diagnosed as a recurrent tumor, what is the reason?

2) Multicentric bone osteoid osteoma has already been reported, but what is the reason for the first report? RF for osteoid osteoma is standard treatment and recurrence after its treatment is not uncommon.

2) Please clarify the arrow because the curved arrow is too small to see.

Are the methods appropriate and well described?
If not, please specify what is required in your comments to the authors.

Unable to assess

Does the work include the necessary controls?
If not, please specify which controls are required in your comments to the authors.

No

Are the conclusions drawn adequately supported by the data shown?
If not, please explain in your comments to the authors.

No
Are you able to assess any statistics in the manuscript or would you recommend an additional statistical review?
If an additional statistical review is recommended, please specify what aspects require further assessment in your comments to the editors.
