Reviewer’s report

Title: Imaging finding and arthroscopic treatment of isolated contracture of the rectus femoris muscle: a case report

Version: 0 Date: 02 Jun 2019

Reviewer: Bernardo Aguilera-Bohorquez

Reviewer's report:

The manuscript is well structured and follows the recommendations of CARElist. As the authors describe, rectus femoris muscle contracture has been widely documented in the literature. However, the interesting of the case was the cause of retraction and the treatment. I think that this manuscript shows the usefulness of the MRI and a useful alternative for the management of this alteration.

Add a brief explanation of the authors' opinion about the strengths and limitations in their approach to this case, a table could be more explanatory.

Are the methods appropriate and well described?
If not, please specify what is required in your comments to the authors.

Yes

Does the work include the necessary controls?
If not, please specify which controls are required in your comments to the authors.

Yes

Are the conclusions drawn adequately supported by the data shown?
If not, please explain in your comments to the authors.

Yes

Are you able to assess any statistics in the manuscript or would you recommend an additional statistical review?
If an additional statistical review is recommended, please specify what aspects require further assessment in your comments to the editors.
