Reviewer’s report

Title: Imaging finding and arthroscopic treatment of isolated contracture of the rectus femoris muscle: a case report

Version: 0 Date: 17 Jun 2019

Reviewer: Luv Singh

Reviewer's report:

This an article highlighting a rare condition involving the diagnosis, treatment, and prognosis of a rectus femoris contracture. The article logically and thoroughly explains their rational and procedure. The literature review was concise and relevant. Pictures and video are adequately descriptive. It should be a useful resource for other orthopedic surgeons who come across this unusual condition. It's clear that barriers to higher level studies are related to difficulty obtaining a high enough N, but a case series to highlight the treatment's reproducibility would be useful going forward if possible.

Are the methods appropriate and well described?
If not, please specify what is required in your comments to the authors.

Yes

Does the work include the necessary controls?
If not, please specify which controls are required in your comments to the authors.

Unable to assess

Are the conclusions drawn adequately supported by the data shown?
If not, please explain in your comments to the authors.

Yes

Are you able to assess any statistics in the manuscript or would you recommend an additional statistical review?
If an additional statistical review is recommended, please specify what aspects require further assessment in your comments to the editors.
