Reviewer’s report

Title: The effect of cyclic knee motion on the elongation of four-strand hamstring autograft in anterior cruciate ligament reconstruction: an in-situ pilot study

Version: 0 Date: 23 May 2019

Reviewer: Asbjørn Årøen

Reviewer's report:

This is not new research. The novelty of the study is the application of a real life set up. It is related to an ACL reconstruction technique that is not used so frequently any more. Still is not so that new approaches are significantly better and from my perspective it adds a valuable piece of information.

Are the methods appropriate and well described?
If not, please specify what is required in your comments to the authors.

Yes

Does the work include the necessary controls?
If not, please specify which controls are required in your comments to the authors.

Yes

Are the conclusions drawn adequately supported by the data shown?
If not, please explain in your comments to the authors.

Yes

Are you able to assess any statistics in the manuscript or would you recommend an additional statistical review?
If an additional statistical review is recommended, please specify what aspects require further assessment in your comments to the editors.

I recommend additional statistical review
