Reviewer’s report

Title: Isolated Palmar Dislocation of Distal Radioulnar Joint: A New Mechanism of Injury: A case report

Version: 0 Date: 23 May 2019

Reviewer: Ulunay KANATLI

Reviewer's report:

Isolated palmar dislocation of distal radioulnar joint is an interesting case report. Although there are several reports in the literature about palmar dislocation of distal radioulnar joint it is easy to miss diagnosis this trauma on the initial X-rays, especially if the lateral view was not well positioned. In this manuscript the mechanism, early diagnosis and early management is well described and discussed.

Are the methods appropriate and well described?
If not, please specify what is required in your comments to the authors.

Yes

Does the work include the necessary controls?
If not, please specify which controls are required in your comments to the authors.

Yes

Are the conclusions drawn adequately supported by the data shown?
If not, please explain in your comments to the authors.

Yes

Are you able to assess any statistics in the manuscript or would you recommend an additional statistical review?
If an additional statistical review is recommended, please specify what aspects require further assessment in your comments to the editors.
