Reviewer’s report

Title: Functional outcome of total knee replacement: a study protocol for a prospective, double-blinded, parallel-group randomized, clinical controlled trial of novel, personalized and conventional implants

Version: 2 Date: 10 Sep 2019

Reviewer: Xinhua Qu

Reviewer's report:

I thought the previous concerns covering the methods and results have been well clarified. The design of study and protocol overall are better organised and clear. Although the only question that remains is the envelope blinding method has many limitations, strict execution following the blinding criteria will solve the problem. Regardless, the previous concerns have been addressed, and the protocol deserves publication.

Are the methods appropriate and well described?
If not, please specify what is required in your comments to the authors.

Yes

Does the work include the necessary controls?
If not, please specify which controls are required in your comments to the authors.

Yes

Are the conclusions drawn adequately supported by the data shown?
If not, please explain in your comments to the authors.

Yes

Are you able to assess any statistics in the manuscript or would you recommend an additional statistical review?
If an additional statistical review is recommended, please specify what aspects require further assessment in your comments to the editors.

I recommend additional statistical review
