Title: Open reduction and internal fixation of humeral midshaft fractures: anterior versus posterior plate fixation

Version: 0 Date: 02 Aug 2019

Reviewer: Christian von Rüden

Reviewer's report:

Dear authors,

I appreciate the opportunity to review this interesting paper presenting new aspects in surgical treatment of midshaft humeral fractures. The study deals with a hot topic and provides two different approaches for physicians all over the world. Nevertheless, I have major concerns to be addressed before the manuscript could be published:

1. I would suggest a minimum 1-year clinical and radiological follow-up. Otherwise, the limited character of the data provided in this manuscript has to be described in the discussion section.

2. Please, provide an intraoperative picture of the anterolateral access to the humeral shaft including the relevant structures.

3. In order to give readers the opportunity to fully engage with your manuscript, I recommend some English language corrections.

Are the methods appropriate and well described?
If not, please specify what is required in your comments to the authors.

Yes

Does the work include the necessary controls?
If not, please specify which controls are required in your comments to the authors.

Yes

Are the conclusions drawn adequately supported by the data shown?
If not, please explain in your comments to the authors.

Yes

Are you able to assess any statistics in the manuscript or would you recommend an additional statistical review?
If an additional statistical review is recommended, please specify what aspects require further assessment in your comments to the editors.

I am able to assess the statistics
