Reviewer’s report

Title: The Efficacy of Continuous versus Single-injection Femoral Nerve Block in Total Knee Arthroplasty: A Systematic Review and Meta-analysis

Version: 0 Date: 03 Jan 2020

Reviewer: Malte Holschen

Reviewer's report:

Abstract: Very good
Background: I would recommend for shortening the introduction. Several studies and their results are already mentioned in this section. This belongs in the discussion or the results section. Methods: Very good
Results: Very good and comprehensive
Discussion and conclusion: Well written. There is one topic which might be added. In times of rapid recovery some patients may start their first exercises a few hours after surgery. This rapid recovery might be impaired by a nerve block. This is of course just a thought and not evidence based… Congratulations!

Are the methods appropriate and well described?
If not, please specify what is required in your comments to the authors.

Yes

Does the work include the necessary controls?
If not, please specify which controls are required in your comments to the authors.

Yes

Are the conclusions drawn adequately supported by the data shown?
If not, please explain in your comments to the authors.

Yes

Are you able to assess any statistics in the manuscript or would you recommend an additional statistical review?
If an additional statistical review is recommended, please specify what aspects require further assessment in your comments to the editors.

I am able to assess the statistics

Quality of written English
