Reviewer's report

Title: Simplified Technique of Laparoscopic Cholecystectomy in a Situs Inversus Patient: A Case Report and Review of Techniques

Version: 2
Date: 1 December 2014
Reviewer: Oleg Symonov

Reviewer's report:

The patient's salient feature, operative procedure and other relevant data in "Case presentation" and "Discussion" portions were appreciably well-elaborated. However, figures with a little more illustration should have been originally put after obtaining written consent from the patient.

Moreover, comparison of similar more available cases' data obtained throughout the year would have been more beneficial to differentiate grossly and statiscally.

Although the language of the article is easily understandable for readers of all level of English Speakers, a little improvement of writing standard is desirable to be counted as a manuscript to be published on International Journals.

Level of interest: An article of outstanding merit and interest in its field

Quality of written English: Needs some language corrections before being published

Statistical review: Yes, but I do not feel adequately qualified to assess the statistics.

Declaration of competing interests:

I declare that I have no competing interests, in addition every research/data collection for manuscript should be obtained and maintained strictly with ethical values.
