Reviewer's report

Title: Transversal incision of the vagina favors the remaining of the tape in the
middle-third urethra compared to longitudinal incision during transobturator sling
procedures for stress urinary incontinence

Version: 4 Date: 1 July 2015

Reviewer: Osman Aşçoglu

Reviewer's report:

I read your manuscript carefully
The subject have been studied by very few participants, and the conclusions that
the author's have not been made are adequate explanation in revise article.
In my opinion this article is not sufficient for publication in this journal.

Level of interest: An article of limited interest

Quality of written English: Needs some language corrections before being
published

Statistical review: Yes, but I do not feel adequately qualified to assess the
statistics.
