Reviewer's report

Title: Transversal incision of the vagina favors the remaining of the tape in the middle-third urethra compared to longitudinal incision during transobturator sling procedures for stress urinary incontinence

Version: 4 Date: 18 June 2015

Reviewer: Tarik Yonguc

Reviewer's report:

I looked at the revised manuscript and authors' response and assessed that my original criticisms have been answered adequately.

Level of interest: An article of importance in its field

Quality of written English: Acceptable

Statistical review: No, the manuscript does not need to be seen by a statistician.
