Reviewer's report

Title: Laparoscopic transperitoneal lateral adrenalectomy for malignant and potentially malignant adrenal tumors

Version: 2 Date: 25 March 2015

Reviewer: Bulent Gunlusoy

Reviewer's report:
Dear Authors;
Laparoscopic surgery is a target surgery for urologists in the recent years. There is a visible advancement in adrenal surgery and urologists perform this very well. There are grammatical and spelling errors that should be corrected ( + comma errors)
Questions:
1. For metastatic upper pole kidneys, did the surgeons do radical nephrectomy and adrenalectomy at the same session?
2. Did the authors believe radiologic accuracy of adrenal malignancy preoperatively? Which method did they prefer at most?
3. Was there any trocar seeding in their series? Or peritoneal spread after surgery?

Level of interest: An article of importance in its field

Quality of written English: Acceptable

Statistical review: Yes, but I do not feel adequately qualified to assess the statistics.
