Title: Safety of bioabsorbable implants in vitro

Version: 0 Date: 21 Sep 2015

Reviewer: Ana Torres

Reviewer’s report:

Poliethyleneglicol sometimes is rejected. We have some patients where the poliethyleneglicol screws implanted in anterior cruciate ligamentoplasties have been rejected. It will be very important to study when the poliethyleneglicol plates and screws used on your study disappear (the poliethyleneglicol screw was present in some of our patients after 12 months) and which is the infection rate of those materials in humans in vivo.
