As mentioned manuscript needs extensive correction of english. Besides language, technique of robotic assisted hydatid cyst excision needs detailed description. Was patient put on pre-operative Albandazole therapy? If yes for long in what dosages was it given? Was the procedure of cyst-pericystectomy performed? or it was marsupilisation (opening the cyst and evacuating the contents only). Were there any communications with biliary channels? How was the dead space created by cyst excision, dealt with.
