Reviewer’s report

Title: Severe anemia due to pharyngeal leech infestation; A case report from Ethiopia

Version: 1 Date: 10 Jul 2017

Reviewer: Hasan Yasan

Reviewer’s report:

Please include all comments for the authors in this box rather than uploading your report as an attachment. Please only upload as attachments annotated versions of manuscripts, graphs, supporting materials or other aspects of your report which cannot be included in a text format.

Please overwrite this text when adding your comments to the authors.

The removal technique of leech from upper airway is very important. The described method (pulling with cup) may be dangerous. Because this leaves some of the mouth parts behind, leading to persistence of bleeding and secondary infection. We have described previously a safe technique of induction anesthesia of sevoflurane. This method paralyse the nervous system of leech and no problem of leech remnant encountered. This may be added as acknowledgment.

Are the methods appropriate and well described?
If not, please specify what is required in your comments to the authors.

No

Does the work include the necessary controls?
If not, please specify which controls are required in your comments to the authors.

Yes

Are the conclusions drawn adequately supported by the data shown?
If not, please explain in your comments to the authors.

Yes

Are you able to assess any statistics in the manuscript or would you recommend an additional statistical review?
If an additional statistical review is recommended, please specify what aspects require further assessment in your comments to the editors.
