Title: An Association of Spleen Volume and Aortic Diameter in Patients and in Mice with Abdominal Aortic Aneurysm

Version: 0 Date: 14 Jul 2017

Reviewer: Amine Mazine

Reviewer’s report:

The authors are to be congratulated on an interesting and well-conducted study.

The manuscript is well-written and easy to follow.

My only reservation has to do with the control group in the clinical arm of the study. As the authors point out, patients in the control group were significantly younger than in the study group. Furthermore, no data were collected regarding height/weight, and the spleen volumes were not indexed. Could the authors comment on how they selected the 25 controls for this study? Why did they only choose 25 patients? The 50-80 age frame seems quite wide and certainly insufficient to consider the two groups comparable.

Thank you for allowing me the privilege of reviewing this excellent work.

Are the methods appropriate and well described?
If not, please specify what is required in your comments to the authors.

Yes

Does the work include the necessary controls?
If not, please specify which controls are required in your comments to the authors.

No

Are the conclusions drawn adequately supported by the data shown?
If not, please explain in your comments to the authors.

Yes

Are you able to assess any statistics in the manuscript or would you recommend an additional statistical review?
If an additional statistical review is recommended, please specify what aspects require further assessment in your comments to the editors.

I am able to assess the statistics
