Title: Surgical treatment strategies for giant inguinoscrotal hernia - a case report with review of the literature

Version: 0 Date: 11 Sep 2017

Reviewer: Daniel Vargo

Reviewer's report:

This is a case report and literature review of inguinoscrotal hernias. The authors do a very good job in describing the issues around repair of the hernia, including the development of abdominal compartment syndrome. Suggestions for the authors:

1. You use the word "lateral release". Most complex abdominal wall surgeons use "component separation via anterior release". I would suggest making this change.

2. Figure 3 is not necessary. It make a relatively straightforward decision making process much too complicated.

3. The manuscript needs to be edited by a native english speaker. There are numerous issues with phrases, tenses, etc., that need to be addressed prior to publication

Are the methods appropriate and well described?
If not, please specify what is required in your comments to the authors.
