Reviewer’s report

Title: Aortoesophageal Fistula and Arch Pseudoaneurysm after Removing of a Swallowed Chicken Bone: A Case Report of One-stage Hybrid Treatment

Version: 0 Date: 13 Sep 2017

Reviewer: Ludovic Canaud

Reviewer's report:

This is an interesting case report that highlights that TEVAR combined with open repair to address the fistula is a suitable option.

This has already been reported for or aortobronchial fistula and should be included in the references.

Combined endovascular and surgical approach for aortobronchial fistula.

Canaud L, D'Annoville T, Ozdemir BA, Marty-Ané C, Alric P.

Another option that should be discussed is a LSA revascularisation (especially LSA transposition) and zone 2 TEVAR rather than deployment of an occluder.

A PET-imaging would also have been useful to clear the risk of stent-graft infection at 6 month.
Are the methods appropriate and well described?
If not, please specify what is required in your comments to the authors.

Yes

Does the work include the necessary controls?
If not, please specify which controls are required in your comments to the authors.

Yes

Are the conclusions drawn adequately supported by the data shown?
If not, please explain in your comments to the authors.

Yes

Are you able to assess any statistics in the manuscript or would you recommend an additional statistical review?
If an additional statistical review is recommended, please specify what aspects require further assessment in your comments to the editors.
