Reviewer’s report

Title: Percutaneous therapy of a mediastinal lymphangioma with fibrin glue: case report with clinical success after 4 years

Version: 1 Date: 28 Nov 2017

Reviewer: Francesco Pia

Reviewer's report:

Include in the text the comment about small cysts like this: "We infer that the multiple small cysts might communicate with the biggest one, because after drainage, nearly all the small cysts were disappeared" Mention in the follow-up description like you explain to us: "This patient came to our hospital to review this year. At present the patient is remain asymptomatic. And she taken a CT at other hospital this year which manifested no recurrence (the same with the CT in this article). Regrettably, because the CT was not taken in our hospital, we can not get a clear image which can be published in the article so we use the CT images she taken 1.5 year after treatment. When she come to our hospital next time I will try to get a clear CT in our hospital."

Are the methods appropriate and well described?
If not, please specify what is required in your comments to the authors.

Yes

Does the work include the necessary controls?
If not, please specify which controls are required in your comments to the authors.

No

Are the conclusions drawn adequately supported by the data shown?
If not, please explain in your comments to the authors.

Yes

Are you able to assess any statistics in the manuscript or would you recommend an additional statistical review?
If an additional statistical review is recommended, please specify what aspects require further assessment in your comments to the editors.
