Reviewer’s report

Title: Lumber Spine Epidural Abscess and Facet Joint Septic Arthritis due to Streptococcus agalactiae: A case report

Version: 0 Date: 07 Feb 2018

Reviewer: Amish Doshi

Reviewer's report:

I believe this is an interesting case report on SEA. There is limited information in the literature on this topic due to the rare diagnosis. It is important to demonstrate these cases and provide examples so that clinicians and radiologist are aware of this entity and can readily identify the abnormality. The authors do a nice job of explaining the case, reviewing the findings, and providing the discussion.

Comments:

1. Please correct WBC value (line 95)

2. Dynamic films line 97 - image only shows upright film. Can authors please include the flexion and extension

Are the methods appropriate and well described?
If not, please specify what is required in your comments to the authors.

Unable to assess

Does the work include the necessary controls?
If not, please specify which controls are required in your comments to the authors.

Unable to assess

Are the conclusions drawn adequately supported by the data shown?
If not, please explain in your comments to the authors.

Yes
Are you able to assess any statistics in the manuscript or would you recommend an additional statistical review?
If an additional statistical review is recommended, please specify what aspects require further assessment in your comments to the editors.

Not relevant to this manuscript

Quality of written English
Please indicate the quality of language in the manuscript:
