Reviewer's report:

Dear authors

Thank you for giving me the opportunity to review your interesting case report. The preoperative embolisation was a intelligent alternative to be sure that the patient could undergo the lobectomy. Did you have difficulty for dissection or location of vessels during the operation?

I think the histological picture is not relevant and should be excluded.

Are the methods appropriate and well described?
If not, please specify what is required in your comments to the authors.

Yes

Does the work include the necessary controls?
If not, please specify which controls are required in your comments to the authors.

Unable to assess

Are the conclusions drawn adequately supported by the data shown?
If not, please explain in your comments to the authors.

Yes

Are you able to assess any statistics in the manuscript or would you recommend an additional statistical review?
If an additional statistical review is recommended, please specify what aspects require further assessment in your comments to the editors.
