Reviewer’s report

Title: A rare intrahepatic subcapsular hematoma (ISH) after laparoscopic cholecystectomy: a case report and literature review

Version: 0 Date: 09 Sep 2018

Reviewer: Arianna Birindelli

Reviewer’s report:

Sorry, but I don't agree with the management of this patient. In my opinion, after the CT scan showing the haematoma but no free fluid, the patient should have been managed conservatively (fluid resuscitation) and not surgically. What did the re-laparoscopy show you that the CT scan didn't? Were you very surprised that the haematoma was not ruptured? I wasn't, after seeing the CT scan images.

Therefore, unless the authors are able to clarify this point I don't think this paper deserves publication.

My comments and suggestions in the attached file.

Are the methods appropriate and well described?
If not, please specify what is required in your comments to the authors.

Yes

Does the work include the necessary controls?
If not, please specify which controls are required in your comments to the authors.

Yes

Are the conclusions drawn adequately supported by the data shown?
If not, please explain in your comments to the authors.

Yes

Are you able to assess any statistics in the manuscript or would you recommend an additional statistical review?
If an additional statistical review is recommended, please specify what aspects require further assessment in your comments to the editors.
