Reviewer’s report

Title: A rare intrahepatic subcapsular hematoma (ISH) after laparoscopic cholecystectomy: a case report and literature review

Version: 1 Date: 04 Nov 2018

Reviewer: Danijel A. Galun

Reviewer’s report:

The authors have presented a case of massive subcapsular liver hematoma following laparoscopic cholecystectomy.

Various publications on this topic can be found in the available literature. In that regard the presented case does not offer a new insight into the problem. For sure, the presented complication occurs much more often that is reported in the literature. However the management of this complication as it is presented in the manuscript is very debatable and many additional questions and comments can be raised.

Are the methods appropriate and well described?
If not, please specify what is required in your comments to the authors.

No

Does the work include the necessary controls?
If not, please specify which controls are required in your comments to the authors.

No

Are the conclusions drawn adequately supported by the data shown?
If not, please explain in your comments to the authors.

No

Are you able to assess any statistics in the manuscript or would you recommend an additional statistical review?
If an additional statistical review is recommended, please specify what aspects require further assessment in your comments to the editors.
