Reviewer’s report

Title: Surgical therapy of primary hepatic angiosarcoma

Version: 1 Date: 13 Dec 2018

Reviewer: Stefan Stremitzer

Reviewer's report:

This is a retrospective study of 9 patients with rare primary hepatic angiosarcoma. The authors showed that in patients with G1 tumors liver resection can be associated with long term survival. The authors therefore concluded that in view of a lack of effective systemic chemotherapy liver resection is a viable treatment option. The manuscript is well-written and only minor issues need to be addressed.

Minor criticism:

1) On page 8, paragraph 1 in the discussion, the authors mention preoperative biopsies. These data should also be presented in the results section.

2) Some typos need to be corrected.

Are the methods appropriate and well described?
If not, please specify what is required in your comments to the authors.

Yes

Does the work include the necessary controls?
If not, please specify which controls are required in your comments to the authors.

Unable to assess

Are the conclusions drawn adequately supported by the data shown?
If not, please explain in your comments to the authors.

Yes

Are you able to assess any statistics in the manuscript or would you recommend an additional statistical review?
If an additional statistical review is recommended, please specify what aspects require further assessment in your comments to the editors.
