Title: Doppler-guided Transanal Hemorrhoidal Dearterilization Versus Conventional Hemorrhoidectomy for Treatment of Hemorrhoids - Early and Long-term Postoperative Results

Version: 1 Date: 17 Jun 2018

Reviewer: Sameh Emile

Reviewer's report:

The authors have responded well to my previous comments. Although the study is a non-randomized trial with high risk of selection bias, and although the excisional hemorrhoidectomy group included various techniques, I think the study is worthy of publication, being one of a very few reports on the long-term outcome of THD procedure.

Are the methods appropriate and well described?
If not, please specify what is required in your comments to the authors.

Yes

Does the work include the necessary controls?
If not, please specify which controls are required in your comments to the authors.
