The authors described about effect of restrictive fluid therapy with hydroxyethyl starch during esophagectomy on postoperative outcome. Intravenous hydroxyethyl starch infusion is associated with an increasing risk of postoperative composite complication. This article is well-written and interesting.

Major limitation

1. This study may be collaborative research on many facilities. So, how does the authors guarantee the quality of operation and postoperative management.

2. The outcome of esophageal surgery is related to the amount of blood loss and the duration of operation. The authors should include the two factors into the variables of analysis.

3. The operative methods should be also described in results section.
Are the methods appropriate and well described?
If not, please specify what is required in your comments to the authors.

Yes

Does the work include the necessary controls?
If not, please specify which controls are required in your comments to the authors.

No

Are the conclusions drawn adequately supported by the data shown?
If not, please explain in your comments to the authors.

Yes

Are you able to assess any statistics in the manuscript or would you recommend an additional statistical review?
If an additional statistical review is recommended, please specify what aspects require further assessment in your comments to the editors.
