Reviewer’s report

Title: A case report of revision occipital-cervical fusion after atlanto-axial instrumentation failure for neurofibromatosis type I

Version: 0 Date: 28 Oct 2018

Reviewer: Faiz Ahmad

Reviewer's report:

Nesplon cables are not a standard way of fixation of such high degree of C1-2 subluxation, and the authors must acknowledge and present this case as a failure of that system rather than failure due to poor bone strength (of which there is no good evidence). Otherwise there is decent educational value to this report.

Are the methods appropriate and well described?
If not, please specify what is required in your comments to the authors.

Yes

Does the work include the necessary controls?
If not, please specify which controls are required in your comments to the authors.

Unable to assess

Are the conclusions drawn adequately supported by the data shown?
If not, please explain in your comments to the authors.

Yes

Are you able to assess any statistics in the manuscript or would you recommend an additional statistical review?
If an additional statistical review is recommended, please specify what aspects require further assessment in your comments to the editors.
