Reviewer’s report

Title: The role of the laparoscopic approach in the surgical management of acute adhesive small bowel obstruction

Version: 0 Date: 04 Jan 2018

Reviewer: Sabri Selçuk Atamanalp

Reviewer's report:

Although the laparoscopic and open surgery groups of the present retrospective study, (patients in the laparoscopic group are younger, have fewer previous abdominal operations, have lower ASA grade and have less complex adhesions), and although the conversion rate is high (38.5%), the study gives 'laparoscopic management of ASBO is feasible, effective and safe. The laparoscopic approach improves postoperative outcomes and functional recovery, and should be considered in patients in whom simple adhesion is suspected. Patient selection is the strongest key factor for having success' message.

Are the methods appropriate and well described?
If not, please specify what is required in your comments to the authors.

Yes

Does the work include the necessary controls?
If not, please specify which controls are required in your comments to the authors.

Yes

Are the conclusions drawn adequately supported by the data shown?
If not, please explain in your comments to the authors.

Yes

Are you able to assess any statistics in the manuscript or would you recommend an additional statistical review?
If an additional statistical review is recommended, please specify what aspects require further assessment in your comments to the editors.

I am able to assess the statistics
