Reviewer’s report

Title: Prospective international multicenter observational study of Novosyn® Quick for skin closures in adults and children (SKINNOQ)

Version: 0 Date: 07 Dec 2018

Reviewer: Abhijit Chandra

Reviewer's report:

I thank the Editor for proving me an opportunity to review this article.

The authors have presented their findings of fast-absorbable synthetic suture (Novosyn® Quick) used for skin closure in adults and children. In this multicentric observational study, authors have concluded that Novosyn® Quick is safe and effective for skin closure and can be used as an alternative to the standard- Vicryl® Rapide suture.

The study is conducted well, methodology is convincing and language is clear.

I hope this study will establish Novosyn® Quick as a safe and effective suture for skin closure in all age groups and for wide indications.

Are the methods appropriate and well described?
If not, please specify what is required in your comments to the authors.

Yes

Does the work include the necessary controls?
If not, please specify which controls are required in your comments to the authors.

No

Are the conclusions drawn adequately supported by the data shown?
If not, please explain in your comments to the authors.

Yes

Are you able to assess any statistics in the manuscript or would you recommend an additional statistical review?
If an additional statistical review is recommended, please specify what aspects require further assessment in your comments to the editors.

I am able to assess the statistics
