Reviewer’s report

Title: Effects of parathyroidectomy on tumoral calcinosis in uremic patients with secondary hyperparathyroidism

Version: 0 Date: 20 Apr 2019

Reviewer: Claudio Gambardella

Reviewer's report:

The Authors performed an interesting analysis on surgical hormone deprivation therapy that causes tumoral calcinosis to shrink in uremic patients with secondary hyperparathyroidism. Actually, there is no current guideline concerning surgical techniques in these patients. Moreover, these patients are extremely challenging due to the frequent comorbidities.

The paper was well written demonstrating a remarkable surgical experience in the treatment of secondary HPT. The References are up dated and I retain that it might be published in after minor revisions.

Minor Revisions

In order to better analyse the surgical implications of parathyroidectomy, the Authors should consider:

After these minor revisions, in my opinion the paper will be suitable for publication.

Are the methods appropriate and well described?
If not, please specify what is required in your comments to the authors.

Yes
Does the work include the necessary controls?
If not, please specify which controls are required in your comments to the authors.

Yes

Are the conclusions drawn adequately supported by the data shown?
If not, please explain in your comments to the authors.

Yes

Are you able to assess any statistics in the manuscript or would you recommend an additional statistical review?
If an additional statistical review is recommended, please specify what aspects require further assessment in your comments to the editors.

I am able to assess the statistics

Quality of written English
Please indicate the quality of language in the manuscript:
