Reviewer’s report

Title: The safety and efficiency of retroperitoneal laparoscopic adrenalectomy via extra and intra perinephric fat approaches: A Retrospective clinical study

Version: 0 Date: 10 Sep 2019

Reviewer: Monica Ortenzi

Reviewer's report:

The paper describes two different retroperitoneal approaches to the adrenal gland. It is overall well written and with a discrete series of patients. In this kind of operation the closure of the adrenal vein could be a problem given the late access to the vascular peduncle. I would ask the authors to better specify any differences in the management of the adrenal vein, if present, between the two type of approaches.

Are the methods appropriate and well described?
If not, please specify what is required in your comments to the authors.

Yes

Does the work include the necessary controls?
If not, please specify which controls are required in your comments to the authors.

Yes

Are the conclusions drawn adequately supported by the data shown?
If not, please explain in your comments to the authors.

Yes

Are you able to assess any statistics in the manuscript or would you recommend an additional statistical review?
If an additional statistical review is recommended, please specify what aspects require further assessment in your comments to the editors.

I am able to assess the statistics
