Reviewer’s report

Title: Ectopic Insulinoma: Case Report

Version: 0 Date: 14 Sep 2019

Reviewer: Yichao Chai

Reviewer's report:

This is an interesting report about two cases of ectopic insulinoma. Ectopic insulinoma is a rare entity. In one patient, preoperative abdominal enhanced volume perfusion CT, somatostatin receptor imaging and 99m Tc-HYNIC-TOC SPECT/CT revealed a mass anterior to the duodenum. In the other patient, MRI and 68 Ga-Exendin-4 PET/CT showed a mass above the spleen. Surgical resection, and postoperative pathological diagnosis confirmed to be insulinoma. The literature review is very comprehensive and very systematic, well more medical scholars should be allowed to learn this knowledge and experience.

Are the methods appropriate and well described?
If not, please specify what is required in your comments to the authors.

Unable to assess

Does the work include the necessary controls?
If not, please specify which controls are required in your comments to the authors.

Unable to assess

Are the conclusions drawn adequately supported by the data shown?
If not, please explain in your comments to the authors.

Yes

Are you able to assess any statistics in the manuscript or would you recommend an additional statistical review?
If an additional statistical review is recommended, please specify what aspects require further assessment in your comments to the editors.

Not relevant to this manuscript
