Reviewer’s report

Title: Total resuscitative endovascular balloon occlusion of the aorta causes inflammatory activation and organ damage within 30 minutes of occlusion in normovolemic pigs

Version: 0 Date: 26 Nov 2019

Reviewer: Federico Coccolini

Reviewer's report:

A very interesting article with really innovative data. Abstract: ok Introduction: ok Mat and meth: ok Results: ok Discussion: ok Conclusion: ok Figure and tables: It is a little difficult to interpret the statistical p values expressed as (a,b, c, etc) in tables. If possible I would suggest to find another graphical way in order to not have people not reading the tables because are difficult to be understood. In my opinion the paper should be accepted for publication. Thank you Federico Coccolini MD

Are the methods appropriate and well described?
If not, please specify what is required in your comments to the authors.

Yes

Does the work include the necessary controls?
If not, please specify which controls are required in your comments to the authors.

Unable to assess

Are the conclusions drawn adequately supported by the data shown?
If not, please explain in your comments to the authors.

Yes

Are you able to assess any statistics in the manuscript or would you recommend an additional statistical review?
If an additional statistical review is recommended, please specify what aspects require further assessment in your comments to the editors.

I am able to assess the statistics

Quality of written English
