Reviewer’s report

Title: Nasolabial Cyst: Case Report and Review of Management Options

Version: 2 Date: 07 Nov 2019

Reviewer: Reviewer 2

Reviewer's report:

REVISION ASSESSMENT FROM THE ACADEMIC PEER REVIEWER:

Has the author addressed your concerns sufficiently for you to now recommend the work as a technically sound contribution? No

Reviewer comments: The authors have revised the manuscript as per my comments.

However there are still concerns regarding the manuscript. The abstract is written is a way as if it is a meta analysis. It must be in the form of case report.

The authors have written in the conclusion that "Nasolabial cysts are rare soft-tissue cysts. Complete surgical excision either open or endoscopic approach is generally described as the best treatment for nasolabial cysts, since it allows histological examination, proving both diagnostic and curative". This conclusion can be written if the abstract is written in the form of review article. Kindly modify the abstract.

Background of the report is sill not very impressive.

Are the methods appropriate and well described?
If not, please specify what is required in your comments to the authors.

Yes

Does the work include the necessary controls?
If not, please specify which controls are required in your comments to the authors.

Yes

Are the conclusions drawn adequately supported by the data shown?
If not, please explain in your comments to the authors.

No

Are you able to assess any statistics in the manuscript or would you recommend an additional statistical review?
If an additional statistical review is recommended, please specify what aspects require further assessment in your comments to the editors.
