Reviewer’s report

Title: Rethinking of ureteral stent removal using an extraction string; what patients feel and what is patients' preference? : a randomized controlled study

Version: 0 Date: 17 Aug 2015

Reviewer: Filippo Maria Turri

Reviewer's report:

In accordance to the results already present in literature, the Authors have noted patients' preference for string extraction, despite the minor drawback on sexual activity. As the Authors noted in their conclusions, the most important approach is accurate counselling. The only real limitation of this work is the sample size, but it still adds data to the existing body of literature.

Are the methods appropriate and well described?
If not, please specify what is required in your comments to the authors.

Yes

Does the work include the necessary controls?
If not, please specify which controls are required in your comments to the authors.

Yes

Are the conclusions drawn adequately supported by the data shown?
If not, please explain in your comments to the authors.

Yes

Are you able to assess any statistics in the manuscript or would you recommend an additional statistical review?
If an additional statistical review is recommended, please specify what aspects require further assessment in your comments to the editors.

I recommend additional statistical review
