Reviewer’s report

Title: The influence of prior laparoscopic experience on learning laparoendoscopic single site surgery: A Prospective comparative preliminary study using cystorraphy in a live porcine model

Version: 0 Date: 19 Sep 2016

Reviewer: Antonio Pastore

Reviewer’s report:

The aim of the study was to assess the impact of prior laparoscopic experience on the ability to learn laparoendoscopic single site surgery (LESS) skills. 3 different groups were compared basing on their previous skill in classic laparoscopy surgery. The results obtained did not show any significant difference between the three groups. The study concluded that even beginners in laparoscopy could benefit from this training achieving the same results of more experienced surgeons. In my opinion this work doesn't add any new significant data to the studies already present in Literature.

Are the methods appropriate and well described?
If not, please specify what is required in your comments to the authors.

Yes

Does the work include the necessary controls?
If not, please specify which controls are required in your comments to the authors.

Unable to assess

Are the conclusions drawn adequately supported by the data shown?
If not, please explain in your comments to the authors.

Yes

Are you able to assess any statistics in the manuscript or would you recommend an additional statistical review?
If an additional statistical review is recommended, please specify what aspects require further assessment in your comments to the editors.
