Reviewer’s report

Title: Heterogeneity in high-risk prostate cancer treated with high-dose radiation therapy and androgen deprivation therapy

Version: 0 Date: 18 Jan 2017

Reviewer: Young Kwok

Reviewer's report:

The major finding of this manuscript is not earth-shattering but is quite important nonetheless. It continues to add to the literature that prostate is a very heterogeneous even within one risk group. The data are solid. The major strength of this report is that the large cohort was treated on successive, prospective trials. The stats and conclusions were appropriate and solid. There are some minor issues:

1. Methods (page 6): The 2 stats references should be numbered like the rest of the references.

2. Conclusions (page 10): Line 33 ("We sought to incorporate…") is repeated in line 53.

Are the methods appropriate and well described?
If not, please specify what is required in your comments to the authors.

Yes

Does the work include the necessary controls?
If not, please specify which controls are required in your comments to the authors.

Yes

Are the conclusions drawn adequately supported by the data shown?
If not, please explain in your comments to the authors.

Yes

Are you able to assess any statistics in the manuscript or would you recommend an additional statistical review?
If an additional statistical review is recommended, please specify what aspects require further assessment in your comments to the editors.

I am able to assess the statistics

Quality of written English
Please indicate the quality of language in the manuscript:
